

FOR IMMEDIATE RELEASE

Integration Logistics Recognized by Cisco as a Video Surveillance Authorized Technology Provider in the United States

Bear, Delaware, July 29, 2010. -- Cisco Systems (NASDAQ: CSCO) announced today that Integration Logistics has achieved Video Surveillance Authorized Technology Provider (ATP) status from Cisco. This designation recognizes Integration Logistics as having fulfilled all the training requirements and program prerequisites to design, resell, install and maintain a full range of video surveillance and access-control solutions.

Cisco® physical-security solutions provide network-centric capabilities to video surveillance, Internet Protocol (IP) cameras, electronic access control and other ground-breaking technologies by converging voice, data and physical security into a single appliance. This enables customers to preserve existing investments in analog-based technology and to use the network as a platform upon which more collaborative and integrated physical-security systems can be built. As customers converge physical-security infrastructures and operations and begin using the network as a platform, they gain rapid access to relevant information and increase interoperability with other IP-centric systems. This enables they achieve higher levels of situational awareness in environments where intelligent and timely decision making is crucial.

“This is an outstanding accomplishment for us,” stated Integration Logistics President John Smolinski. “Achieving Cisco ATP Video Surveillance status validates our expertise in this market. We look forward to continuing to work alongside the Cisco account management team to offer an expanded suite of services to our customers.”

“As we move into new markets and emerging technologies, the Cisco Authorized Technology Provider Partners are instrumental in helping our customers turn innovative technology into a competitive advantage,” said Steve Benvenuto, director of emerging technologies for worldwide channels at Cisco. “As a Cisco Video Surveillance ATP Partner, Integration Logistics brings a unique set of skills to potential customers, combining a proven physical-security track record with Cisco expertise.”

To qualify for the Video Surveillance ATP Program, Integration Logistics had to meet a number of requirements, from having staff who fulfill specific job responsibilities to achieving the Cisco Express Foundation Specialization. Those requirements are designed to help a partner maintain high levels of customer satisfaction.

“You will notice the difference!”™

The Cisco ATP Program is a key part of Cisco's emerging technology go-to-market strategy. The program helps define the knowledge, skills and services that channel partners need to successfully sell, deploy and support a subject technology. As markets mature and technologies progress along the adoption curve, some ATP programs may migrate to Cisco specializations.

About Integration Logistics, Inc.

Integration Logistics (www.IntegLog.com) is a technology solutions provider, headquartered in Bear, Delaware, with sales and support locations in Texas, Georgia, California, New Jersey, Ohio, and New England. Integration Logistics specializes in Security systems (including Video Surveillance, Access Control, and Fire and Security alarm systems); Information Systems (including Network Design and Implementation and Network Security); Security Consulting and Auditing; as well as Business Infrastructure (including Telecommunications, Structured Cabling, and Backup Power).
